Dear Student,

We are glad you've registered for the EcoInnovators Ideathon 2026 challenge! It is a great opportunity to demonstrate your creativity and technical knowledge in AI/ML, to address a real problem with an innovative solution..

The problem statement is related to the governance of a central government scheme to increase the share of rooftop solar and empower households to generate their own electricity. As a part of this challenge, you will build a digital solution to track implementation of rooftop solar PV system.

You will have the following resources to help you:

• A pdf document with an overview of rooftop solar PV systems, key objectives your solution must achieve, the input and output data formats, guidelines/rules that you must follow, helpful resources you can refer and steps to follow while submitting the solution

• Training dataset

• The webinar recording held on 17th November for easy access and revision.

The pdf document and training dataset can be downloaded from here. This was covered in detail during the webinar. If you miss it, you should catch the recording here

We look forward to your innovative solutions. All the best!

Regards
Team EcoInnovators Ideathon
